

Effective Date: 1/1/2023

This letter stipulates that all spent mushroom compost received from C.P. Yeatman & Sons, Inc. comes directly from certified organic mushroom growing houses owned by C.P. Yeatman & Sons, Inc., which are covered by the Organic Certificate available. In addition, C.P. Yeatman & Sons, Inc. guarantees that all compost was pasteurized with live steam at 140 degrees F for at least 2 hours before planting the mushroom spawn. After harvesting is complete, the compost is steamed again, at 150 degrees F for at least 24 hours, to completely kill off any remaining living organisms, before being removed from the house to be picked up by you.

Sincerely,

Meghan Klotzbach
VP Operations, Sales & Marketing
